

Customer feedback

After purchasing 60 RPCM™ Cool Vests, the safety committee at Visy Paper are delighted with the results.

We have broken 3 production records for the last 3 months. The increased productivity from employees has allowed the vests to pay for themselves, making the RPCM™ Cool Vest a worthwhile investment. Our staff are now much happier and more productive. I recommend the RPCM™ Cool Vest to any company whose staff are exposed to hot working conditions.

Ross Lundberg
Visy Paper

Crack Sealing Australia has been using the RPCM™ Cool Vest for two years.

Quite simply we wouldn't go back. In our business crews are based outdoors in the hot Queensland sun, behind heat producing machines to repair cracks in roads. Air temperature is often in the mid to high 30's with road temperatures exceeding 40°C. Temperatures behind the machines exceed this again which means without a RPCM™ Cool Vest our crew were only able to spend 15 minutes behind a machine before having to rotate with another crew member. We have also found that when the RPCM™ Cool Vest is fastened firmly, it provides extra back support which is important when dealing with labour-intensive work. The high visibility vest conforms to Australian Standards, which means that we can wear the high visibility vest and meet safety requirements. Seeing the benefits for my company, I now recommend the RPCM™ Cool Vest to all my colleagues.
